

UF UNIVERSITY OF FLORIDA

## 2019 Haylage Field Day

UF/IFAS Range Cattle Research and Education Center  
Ona, FL

---

---

---

---

---

---

---

---

### Outline

UF UNIVERSITY OF FLORIDA

- **Introduction**
- DM concentration
- Inoculant/Additive
- General Management Practices
- Conclusions

---

---

---

---

---

---

---

---

### Introduction

UF UNIVERSITY OF FLORIDA

- Unofficial definition

Baleage = Forage preserved by fermentation in a bale with lesser DM concentration than hay ( $\leq 85\%$  DM) but greater than silage ( $\geq 30-35\%$  DM)

Haylage = Forage preserved by fermentation with lesser DM concentration than hay ( $\leq 85\%$  DM) but greater than silage ( $\geq 30-35\%$  DM)

Silage = Forage preserved by fermentation at  $\leq 30-35\%$  DM

---

---

---

---

---

---

---

---

## Introduction

- In tropical and subtropical regions, silage has been used as a method of forage conservation for decades, primarily by dairy or feedlot operations

---

---

---

---

---

---

---

---

## Introduction

- The development of machinery to wrap round bales has triggered the interest of beef cattle producers to produce warm-season grass silage

---

---

---

---

---

---

---

---

## Introduction

- However, a perception was created that the fermentation process would increase forage nutritive value.
- Harvesting at the optimum regrowth interval is crucial to have baleage with acceptable quality.

Weeks	Herbage Accumulation (kg/ha)	CP (%)	TDN (%)
2	1500	16	56
4	2100	13	57
6	3200	9	52
8	3600	7.5	48
10	4600	8.0	46

---

---

---

---

---

---

---

---

## Introduction

- Warm-season grasses have undesirable characteristics for successful preservation by fermentation
  - High water concentration
  - Decreased concentration of water soluble carbohydrates (WSC)
  - The main WSC stores is starch, and LAB do not have the ability to ferment starch directly (McDonald et al. 1991)

---

---

---

---

---

---

---

---

## Introduction

- However, it may be the only option to preserve forages in tropical and sub-tropical regions during the summer

---

---

---

---

---

---

---

---

## Introduction

	Target Values
Dry matter (%)	> 30%
pH	< 5
Lactic acid (%)	6-8
Acetic acid (%)	< 2
Propionic acid (%)	0-1
Butyric acid (%)	< 0.1
Mold count (cfu/g)	< 300,000

---

---

---

---

---

---

---

---

## Outline

- Introduction
- **DM concentration**
- Inoculant/Additive
- General Management Practices
- Conclusions

---

---

---

## Outline

- Introduction
- Forage Species
- Dry matter concentration
- Inoculant/Additive
- **General Management Practices**
- Conclusions

---

---

---

---

---

---

---

## General Management Practices

- Do not bale forage and leave the bales on the ground because they will pick up moisture and create "hot spots" after ensiling

---

---

---

---

---

---

---

## General Management Practices

- Do not guess DM concentration! Wilting time is different among forage species.
- Sudangrass, millet, and sorghum require special attention because they take longer to wilt due to thicker stems

---

---

---

---

---

---

---

## General Management Practices

- Wrap with a minimum of 6 layers of plastic. If film wrap is used, it can save 2 layers of plastic wrap

---

---

---

---

---

---

---

---

## Outline

- Introduction
- DM concentration
- Inoculant/Additive
- General Management Practices
- **Conclusions**

---

---

---

---

---

---

---

---

## Conclusions

- Select forage species with greater nutritive value and harvest at the optimum regrowth interval. Remember, .....in.....out.
- Bailing and wrapping at the target DM concentration is crucial to obtain desirable fermentation. The target DM concentration may vary according to forage nutritive value, but in general, wilting to a 50% DM is a safe recommendation

---

---

---

---

---

---

---

---

## Conclusions

- Additives to promote fermentation may improve fermentation and nutritive value
- Further research with inoculants are necessary to have more predictable and consistent effects of inoculants in warm-season grass baleage

---

---

---

---

---

---

---

## Thank you

Thanks to the Southeast Dairy Inc. and the Milk Check-Off Research and Education Committee for funding the haylage research at the Range Cattle Research and Education Center
